40%

of early retirement is due to chronic pain.

Chronic pain is defined as daily pain that lasts longer than three months and occurs for a variety of reasons including an injury, surgery, arthritis or other medical conditions such as cancer, endometriosis or migraines or it can be a condition in its own right.

People who live in rural, regional and remote Australia are more likely to have chronic pain than those who live in major cities.

People who live outside urban areas are 23 per cent more likely to experience back pain.

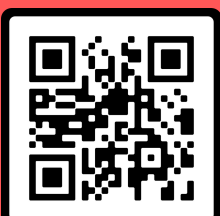

Chronic pain affects more than 3.4 million Australians.

3.4M

42.9% of people who experience pain, live with the condition for more than five years.
